Tackling the big issues in oral health policy

Dr Len Crocombe
Chief Investigator
APHCRI Centre for Research Excellence in Primary Oral Health Care
The research reported in this presentation is a project of the Australian Primary Health Care Research Institute, which is supported under the Australian Government’s Primary Health Care Research, Evaluation and Development Strategy.
'Researchers are from Venus and policy-makers are from Mars'

Two communities theory: Birnbaum 2000; Bell 2010
• Research evidence and policy gaps
• CRE research program
• Research capacity building and knowledge exchange
Research Evidence

- Oral disease has a large effect on people’s quality of life, is common, and treating it is big business
- Some people are missing out on dental care
- The oral health of Australian adults and children has improved greatly and dentistry has changed to reflect that fact.
- The causes of poor oral health are not necessarily what you think
Research Evidence

- Avoidance of food due to dental problems (AIHW 2008), restricted activity and days of work lost (Reisine 1984; Sternbach 1986; Spencer & Lewis 1988; Gift & Redford 1992)

- Periodontal (gum) disease (19%), 1+ tooth, untreated decay (25.5%), 1+ tooth extracted due to decay (61.0%) (AIHW 2008)

- Expenditure on dentistry in Australia was 7.7b in 2009-10 (AIHW 2012)
“The repeat restoration cycle” (Elderton, 1987)
Research Evidence

- Mix of services per year by dentists is shifting:
  - more diagnostic, preventive, root fillings and crown & bridge
  - less denture and extraction services

Brennan 2000,
HWA citing from ARCPOH NDTIS 2013
Research Evidence

Poor oral health:

• frail and older people (Chalmers 2002)
• rural residents (Crocombe et al. 2010)
• Indigenous Australians (Slack-Smith 2011)
• Australians with physical and intellectual disabilities (Pradhan et al. 2009)
• People of low socio-economic status (Sanders et al. 2006)
Research Evidence

Lifestyle causes of poor oral health

- **Poor hygiene** (Davies et al. 2003; Hujoel et al. 2006)
- **Poor diet** (Rugg-Gunn, 1993)
- **Lack of access to dental care**
  (National Oral Health Plan 2004-2013)
- **Smoking** (Do et al. 2008)
- **Low fluoride exposure** (Slade et al. 2013)

Policy Approaches

- An increasing focus on oral health
- Improving access to dental care
- Oral Health Promotion
Policy Approaches

The 2012 Federal Budget:

• $515.3 million, over four years, for dental health.
• $10.5 million for oral health promotion and to develop a National Oral Health Promotion Plan
• $35.7 million for an expansion of the Voluntary Dental Graduate Year Program
• $45.2 million for a Graduate Year Program for Oral Health Therapists
• $77.7 million for a Rural and Remote Infrastructure and Relocation Grants for Dentists
• $450,000 to a NGO to coordinate further pro-bono work by dentists.
Policy Approaches

August 2012:

• $2.7 billion for *Grow Up Smiling*, a children’s dental scheme;

• $1.3 billion for states and territories from 1 July 2014 to expand services for adults in the public system; and

• a $225 million Flexible Grants Program beginning in 2014 to provide dental infrastructure in outer metropolitan, rural and regional areas.
Research and Policy

• Improving access to dental care for those people currently missing out
• The anti-smoking campaign
• Inconsistent policy approach
• Oral health is funded and managed separately from other areas of health
• Some areas are removing fluoride from water supplies
• Lack of focus on social determinants of health
Research Evidence

Successful aging and oral health
Rural oral health
Indigenous oral health
The oral health of people with physical & intellectual disabilities
Outline of research program

Theme 1: Successful aging and oral health

How I laughed at my mother’s false teeth,
As they foamed in the waters beneath.
But now comes the reckonin’
It’s me they are beckonin’
Oh, I wish I’d looked after me teeth.

(Pam Ayres, 2008)
Outline of research program

Theme 1: Successful aging and oral health

• Community based trial: Medical GP assessment of need for dental care.
• Incorporating dental professionals into aged care facilities.
Theme 2: Rural oral health

‘I went to the doctor’s and he said, It’s not my problem, Wade.’

He said, ‘You need a dentist.’

Sendziuk, 2007
Outline of research program

Theme 2: Rural oral health

• Dental practitioners: Rural work movements
• Relationship of dental practitioners to rural primary care networks
• International oral health policy implications for Australia

Maitland, York Peninsula
Outline of research program

Theme 3: Indigenous oral health
Outline of research program

Theme 3: Indigenous oral health

• Why Aboriginal adults who are referred for priority dental care do not take up or complete a course of dental care

• Perceptions and beliefs regarding oral health of Aboriginal adults in Perth and key rural centres, Western Australia
Outline of research program

Theme 4: The oral health of people with physical & intellectual disabilities.

- Community-based Trial: Train carers of people with physical and intellectual disabilities
Research Capacity Building

- Postdocs
- PhD students
- Adjunct positions
- Practitioner scholarships
Research Capacity Building

Chronic Disease Dental Scheme

Total number of services per head of population by regional area
Knowledge Translation and Exchange

“Laws are like sausages, it is better not to see them being made.”

Otto von Bismarck (1815 – 1898)
